Sohan (Theux) project, Belgium 2025-2026

305 trees planted

The Sohan project focuses on restoring forest resilience across three forest areas in Theux, where several stands have been weakened by fungal disease, aging trees and climate-related stress. Extreme weather events, particularly the heavy rains and floods of 2021 in the Vesdre Valley, further highlighted the vulnerability of local forest ecosystems and the need for proactive restoration. Across 6.84 hectares, 6460 trees will be planted in April 2026 season. The project brings together a balanced mix of oak, hornbeam, chestnut, rowan, hazel, larch and cedar. This diversity helps prevent the formation of single-species stands, reduces risks linked to pests and diseases, and strengthens overall biodiversity. Before planting, the plots will undergo targeted preparation, including soil work where needed and the sanitary felling of trees affected by fungal decline to prevent further spread. Appropriate protection measures will also be installed to ensure successful establishment of the young trees. With a deep respect for local resources, the estate is managed according to sustainable and responsible forestry principles, including thoughtful thinning practices that support long-term timber production while avoiding clearcutting. The forest will be managed under an irregular continuous cover system, ensuring permanent tree cover and encouraging natural regeneration. Furthermore, the project contributes to soil stabilization, the reinforcement of the regional ecological network, and the preservation of the scenic character of the Sohan valley, while offering habitat for local wildlife. It represents a concrete, climate-adapted approach to responsible forestry and long-term forest stewardship. Plantation updates: - Planting date: The trees were planted in March 2026, across three plots covering 6.84 ha. - 6460 trees planted: A diversified mix of 1489 oak, 1356 larch, 480 cedar, 889 chestnut, 353 rowan, 296 hazel and 1597 hornbeam. Older trees on the plot were preserved where possible. Numerous birds were observed during planting, including woodpeckers and buzzards over several days. - Maintenance: Monitoring of the plantation and further clearing are planned in the coming period.

Farms planted in February 2025 - Akamasoa agroforestry project, Madagascar

500 trees planted

On these farms, multiple small agroforestry plantations were executed in collaboration with the local farmers and as part of the large Akamasoa agroforestry project. During February 2025, 2703 trees were planted, including: - 25% cash crops, such as Pink Berries and Ravintsara - 72% forest trees, such as Acacia, Jacaranda, and Eucalyptus - 3% fruit trees, such as Rotra
