Reforestation in Ingung Kapia (DRC), 2022-2024

2530 trees planted

In Ingung Kapia, in the Democratic Republic of Congo, we plant native tree species on degraded soils to restore biodiversity and create meaningful employment for local communities through manual planting work. Since we began in 2022, our reforestation program has taken on the challenge of restoring the natural environment and preventing further desertification of the region. Looking ahead, our long-term vision includes well-considered forest management, designed to relieve pressure on DR Congo's precious old-growth jungle. Our planting target is 1,000 trees per hectare at survival, achieved by initially planting 1,250 trees per hectare to account for natural loss. The species mix is intentionally diverse, combining native forest trees to support soil recovery and ecological resilience. The full list of species planted includes: Millettia laurentii (Wenge) Cassia siamea & Cassia floribunda Pentaclethra macrophylla (Owes) Piptodeniastrum africanum (Osing) Hevea brasiliensis Uapaca mole (Ontang) Canarium schweinfurtii (Mbidi) Prioria balsamifera (Mwana Mpembe) Ricinodendron heudelotii (Ongiel) Erythrophleum gabonensis (Onkok) Guibourtia demeusei (Ladzum) Paramacrolobium coelucum (Obwar Osur) Prioria oxyphylla (Tshitola) Pterocarpus soyauxii (Padouk) Ceiba pentandra (Obel) Milicia excelsa (Mulundu) Leplaea cedrata Pachira aquatica (Nguba Mindele) Staudtia kamerunensis Ongokea gore (Ndeke) Acacia auriculiformis Acacia mangium Maesopsis eminii Gilbertiodendron dewevrei (Labong) Dacryodes normandii Celtis tessmannii Pycnanthus angolensis Nauclea diderrichii Pericopsis elata (Afromosia) Millettia drastica Coffea arabica & Coffea robusta Autranella congolensis Entandrophragma gabonense (Tiama Blanc) Khaya grandifoliola Treculia africana Combretum welwitschii Afzelia bipindensis Millettia versicolor (Ablo) Olong Obol Mbem Dileka Nkokoking The full reforestation plot spans 52.5 hectares. We began planting in 2022, and by the end of 2024 the entire plot was fully funded, a milestone we are incredibly proud of. This work is made possible by a dedicated team of 150 day laborers (136 men and 14 women) from the local community, ensuring that forest restoration directly translates into livelihoods and long-term investment in the land by the people who depend on it most.

Mangrove plantation in Majunga, October 2025

580 trees planted

On two sites (1.42 ha & 0.77 ha), in the Bombetoka Bay located in the North-West of Madagascar, more specifically in the village of Amparemahintsy (Boanamary municipality, Boeny), we're planting new mangrove trees to restore the mangrove forest. In October 2025, 14235 mangrove trees of two species were planted here: Ceriops tagal and Rhizophora mucronata. The overall objective is to restore degraded lands and promote better management of the mangrove ecosystem to improve the living conditions of the local communities. Moreover, the mangroves provide spawning grounds for shrimps, crabs, and fish, which helps to boost the economy of the community.
