Reforestation in the Magamba Nature Forest Reserve - plot I

1392 trees planted

The Magamba Nature Forest Reserve has suffered several wildfires which were caused by human economic activities, such as local honey harvesting practices and the search for fuel wood. The reserve is important for biodiversity conservation, enhancing eco-tourism, and the water supply of many villages. This project is going to be conducted at Nkundei Village which is among the 21 villages surrounding the Magamba Nature Forest Reserve. At this site, the people from Nkundei village planted 2035 trees in November 2023 and 3375 trees in April/May 2024. The Belgian team of Go Forest was also at the field during the second planting activities in April. In total, we planted 5410 trees with the aim to restore the loss of biodiversity and regain the nature of the Magamba Nature Forest Reserve. We are planting more than 11 different indigenous tree species to introduce as much diversity as possible. The trees will be maintained and monitored for 5 years and every tree that dies within this period, will be replaced by a new one. The most important maintenance activity is the clearing of ferns!

GOFOREST

Agroforestry in the local villages, Western Usambara Mountains, Tanzania

2111 trees planted

As part of our ongoing efforts to maximize the impact of our initiatives, we have decided to allocate 50% of the funds for Tanzania to reforestation efforts with native tree species, while the remaining 50% is allocated to supporting agroforestry tree planting within the local communities' farms. Agroforestry integrates trees and shrubs into agricultural landscapes, promoting sustainable farming practices that increase crop yields, improve soil health, and provide additional income sources for local farmers. By supporting both reforestation and agroforestry, we ensure a comprehensive approach that addresses environmental sustainability, food security, and economic development within the community. In the rainy season of November 2024, our local team and the local people of Nkundei village planted 2,258 fruit trees in the individual-owned farms in the Nkundei community.

Reforestation in the Magamba Nature Forest Reserve - plot II

1880 trees planted

The Magamba Nature Forest Reserve has suffered several wildfires which were caused by human economic activities, such as local honey harvesting practices and the search for fuel wood. The reserve is important for biodiversity conservation, enhancing eco-tourism, and the water supply of many villages. This project is going to be conducted at Nkundei Village which is among the 21 villages surrounding the Magamba Nature Forest Reserve. Starting in November 2024, a total of 5,325 new native trees are planted with the aim of restoring the loss of biodiversity and regaining the nature of the Magamba Nature Forest Reserve. We are planting more than 11 different indigenous tree species to introduce as much diversity as possible. The trees will be maintained and monitored for 5 years and every tree that dies within this period will be replaced by a new one. The most important maintenance activity is the clearing of ferns!

Mangrove plantation in Majunga, to be planted in the next planting season

683 trees planted

In the course of 2026, these mangroves will be planted in Majunga, Madagascar. Once the planting has taken place, this section will be updated with the correct species & geolocation. Mangrove species are planted according to the natural distribution, to ensure great adaptation and survival. We plant two different species: - Ceriops Tagal (Ceriops), also known as "Yellow mangrove" or "Spurred mangrove.". Ceriops is considered the female mangrove by the locals in Madagascar, due to its smaller propagules and less intricate roots. Depending on the area, this species is more or less spread, yet play a crucial role in the ecosystem. - Rhizophora Mucronata (Rhizo). Rhizophora Mucronata is a species of mangrove, commonly known as the "Red mangrove" or "Loop-root mangrove." One distinctive feature of Rhizo is its prop roots, which extend from the trunk and branches down into the mud or water.

Mangrove plantation in Majunga, October 2025

309 trees planted

On two sites (1.42 ha & 0.77 ha), in the Bombetoka Bay located in the North-West of Madagascar, more specifically in the village of Amparemahintsy (Boanamary municipality, Boeny), we're planting new mangrove trees to restore the mangrove forest. In October 2025, 14235 mangrove trees of two species were planted here: Ceriops tagal and Rhizophora mucronata. The overall objective is to restore degraded lands and promote better management of the mangrove ecosystem to improve the living conditions of the local communities. Moreover, the mangroves provide spawning grounds for shrimps, crabs, and fish, which helps to boost the economy of the community.

GOFOREST

Mangrove plantation in Majunga, April 2026

105 trees planted

In the Bombetoka Bay located in the North-West of Madagascar, more specifically in the village of Nosy Kabija (Belobaka municipality, Boeny), we've planted new mangrove trees on a site of 1.87 ha to restore the mangrove forest. In April 2026, 12177 mangrove trees of two species were planted here: Ceriops tagal and Rhizophora mucronata. The overall objective is to restore degraded lands and promote better management of the mangrove ecosystem to improve the living conditions of the local communities. Moreover, the mangroves provide spawning grounds for shrimps, crabs, and fish, which helps to boost the economy of the community.

GOFOREST

Mangrove plantation in Majunga, December 2025

558 trees planted

In the Bombetoka Bay located in the North-West of Madagascar, more specifically in the village of Nosy Kabija (Belobaka municipality, Boeny), we've planted new mangrove trees on a site of 2.6 ha to restore the mangrove forest. In December 2025, 8892 mangrove trees of two species were planted here: Ceriops tagal and Rhizophora mucronata. The overall objective is to restore degraded lands and promote better management of the mangrove ecosystem to improve the living conditions of the local communities. Moreover, the mangroves provide spawning grounds for shrimps, crabs, and fish, which helps to boost the economy of the community.
